

# Customization & Professionalization

## 5 Gallon Bottle Cap De-caper

### Overview

- De-capper is special equipment for 5-gallon bottle caps taking-off. When empty and used bottle with a cap passes the sensor, the de-capper automatically works to take the cap off.
- The machine adopts PLC control. It can automatically stop or individually work with the production line.
- The production capacity can be adjusted.
- De-capper construction air-drive can be adjusted to meet different bottle height and bottle mouth
- Improve de-cap successful efficiency.
- The de-cap head has a patent design and it easily take cap with a shrink sleeve film off. This feature is unique in the market. Most other de-capper hardly take sleeve film off if the sleeve did not manually take it off before de-cap.

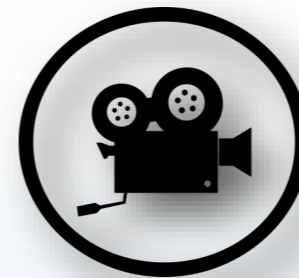

### Electric system

The electric part consists of PLC controller, AC contactor, Time Relay and Air Switch.

### Pneumatic system

The pneumatic part consists of Cylinder, Pneumatic electromagnetic valve and pneumatic control electric control box.
